PREREQUISITE COURSES FOR APPLICATION TO OTA-MOT PROGRAM 2023

Note: Students are highly encouraged to complete prerequisites as early as possible. All courses for 2023 must be completed before starting MOT courses.

The Muskingum University MOT Program is a weekend format for individuals who are already credentialed as occupational therapy assistants. We do not require a Baccalaureate degree to begin MOT courses, however in order to be prepared for MOT content, students must have foundational knowledge to inform further learning. The following content will be required as prerequisite. Applicants will need to receive MOT program director approval through the Director of GCS Allied Health Programs, of the following general education areas. The content is more important than the specific number of credits, as long as it is transcribed and approved by MOT Program Director as meeting the requirement. These courses can be taken at any institution and approved by Muskingum University or they are available here.

Abnormal Psychology	3 semester credits
Anatomy & Physiology	6 semester credits
Human Development	3 semester credits
Human Disease	2 semester credits
Statistics	3 semester credits

Students accepted into the MOT Program for start in fall 2023 will be required to take a one-hour Cognitive Neuroscience Prep Course (PSYC 419) during Spring 2, 2023.

In addition, applicants must have credit or an approved course as substitute for the following occupational science courses prior to application to the MOT Program. They are available online via the Muskingum Adult Program in a fully online format. Beginning in September, 2017 they further must be taken in this order.

HLSC 351, Occupational Science	3 semester credits
HLSC 453, Elder Cognitive Health and Wellness	3 semester credits
HLSC 455, Sensory Function Across the Lifespan	3 semester credits

In order to facilitate completion of the prerequisite courses in time to apply for the MOT Program a schedule of course offerings has been developed that will make each of the Occupational Science courses available twice per year (beginning fall, 2017), for a total of 4 sequences.
